Product Information

**ECN 1123 S**
**EQN 1135 S**

Absolute Rotary Encoders with DRIVE-CLiQ Interface for Safety-Related Applications

Firmware 53
ECN 1123 S, EQN 1135 S

Rotary encoders for absolute position values with safe singletum information
- 75A mounted stator coupling
- Blind hollow shaft (Φ 6 mm) for axial clamping (1KA)

Functional Safety

ISO 4762 – M3 x 10 – 8.8 – MKL
Md = 1.10 ± 0.07 Nm

ECN: 16.25 ± 0.5
EQN: 29.15 ± 0.5

• 75A mounted stator coupling
• Blind hollow shaft (Φ 6 mm) for axial clamping (1KA)

Required mating dimensions

- Bearing of mating shaft
- M1 = Measuring point for operating temperature
- M2 = Measuring point for vibration
- 1 = Contact surface of slot
- 2 = Chamfer at start of thread is mandatory for material bonding anti-rotation lock
- 3 = Shaft surface; ensure full-surface contact!
- 4 = Slot required only for ECN/EQN and ECI/EQI with WELLA1 = 1KA
- 5 = ECI/EQI FS flange surface: ensure full-surface contact!
- 6 = Coupling surface of ECN/EQN
- 7 = Maximum permissible deviation between the shaft surface and coupling surface; compensation of mounting tolerances and thermal expansion, of which ±0.15 mm of dynamic axial motion is permitted
- 8 = Maximum permissible deviation between the shaft surface and flange surface; compensation of mounting tolerances and thermal expansion
- 9 = ECI/EBI flange surface; ensure full-surface contact!
- 10 = Undercut
- 11 = Possible centering hole
- 12 = 15-pin PCB connector
- 13 = Cable fastener with crimp sleeve; diameter: 4.3 mm ±0.1 mm; length: 7 mm
- 14 = Positive locking element; ensure correct engagement in Slot 4 (e.g., by measuring the device overhang)
- 15 = Direction of shaft rotation for ascending position values
- 16 = Uncoated; shaft coating not permitted

Tolerancing ISO 8015
ISO 2768 - m H
< 6 mm: ±0.2 mm

### Interface/ordering designation

- **DRIVE-CLiQ / DQ01**
- **Firmware 01.32.26.53**
- **Siemens software**
  - SINAMICS, SIMOTION: ≥ V4.4 HF4;
  - SINUMERIK with safety: ≥ V4.4 SP2; SINUMERIK without safety: ≥ V4.4 SP1 HF3
- **Position values per revolution**
  - 8388608 (23 bits)

### System accuracy

- ±60°

### Electrical connection

- 15-pin PCB connector (with connection for external temperature sensor\(^5\))
- **Cable length**
  - ≤ 40 m (see Cable lengths in the Cables and Connectors brochure)
- **Supply voltage**
  - DC 24 V (10 V to 28.8 V); up to DC 36.0 V possible without compromising functional safety
- **Power consumption (max.)**
  - At 10 V: ≤ 850 mW; at 28.8 V: ≤ 900 mW
  - At 10 V: ≤ 950 mW; at 28.8 V: ≤ 1000 mW
- **Current consumption (typical)**
  - At 24 V: 32 mA (without load)
  - At 24 V: 35 mA (without load)

### Shaft

- Blind hollow shaft (Ø 6 mm) with positive-locking element (1KA)
- **Speed\(^6\)**
  - ≤ 12000 rpm
- **Starting torque (typical)**
  - 0.001 Nm (at 20 °C)
  - 0.002 Nm (at 20 °C)
- **Moment of inertia of rotor**
  - 0.4 · 10⁻⁶ kgm²
- **Angular acceleration of rotor**
  - ≤ 1.0 · 10⁵ rad/s²
- **Axial motion of measured shaft**
  - ≤ 0.5 mm

### Natural frequency of stator coupling

- ≥ 1000 Hz

### Vibration and Shock

- **Vibration**
  - 55 Hz to 2000 Hz
  - ≤ 200 m/s² (EN 60068-2-6); 10 Hz to 55 Hz, 3.2 mm constant peak to peak
- **Shock**
  - 6 ms
  - ≤ 2000 m/s² (EN 60068-2-27)

### Operating temperature

- −40 °C to 95 °C

### Trigger threshold for exceeded temperature error message

- 125 °C (measurement accuracy of the internal temperature sensor: ±7 K at 125 °C)

### Relative humidity

- ≤ 93 % (40 °C/21 d as per EN 60068-2-78), without condensation

### Protection

- EN 60529 IP40 (read about insulation under Electrical safety in the Interfaces of HEIDENHAIN Encoders brochure; contamination from the ingress of liquid must be prevented)

### Mass

- 0.1 kg

### ID number

- 1211015-02
- 1211017-02

---

1) For use at: ≤ 1000 m above sea level
2) Further tolerances may arise in subsequent electronics after position value comparison (contact mfr. of subsequent electronics)
3) Information from Siemens as per the document “Certified encoders with DRIVE-CLiQ Dependencies on SIMOTION / SINUMERIK and SINAMICS Hardware and Software versions” (version: 12/2018)
4) The calculation time TIME_MAX_ACTVAL specifies the time after which a data transfer from the encoder to the control can start within the current-regulator clock time.
5) See Temperature measurement in motors in the Encoders for Servo Drives brochure.
6) At ≥ 2 position requests per revolution
Mounting

The blind hollow shaft of the rotary encoder is seated onto the measured shaft and fastened with a central screw. It is particularly important to ensure that the positive-locking element of the rotary encoder shaft securely engages the corresponding slot in the measured shaft. Mounting on the stator side is performed without a centering collar on a flat surface with two clamping screws. Use screws with material bonding anti-rotation lock (see Mounting accessories).

For the customer-side mounting design, the material properties and conditions in accordance with the General mechanical information in the Encoders for Servo Drives brochure must be complied with. The materials specifications for aluminum and steel apply both to the customer-side shaft and stator.

For the design of the mechanical fault exclusion for the shaft connection, the following maximum torque $M_{\text{max}}$ must be taken into account:

$$M_{\text{max}} = 1.0 \text{ Nm}$$

The customer’s mechanical design must ensure that the maximum torque $M_{\text{max}}$ occurring in the application can be transmitted.

Mounting accessories

Screws
Screws (central screw, mounting screws) are not included in delivery and can be ordered separately.

1) With coating for material bonding anti-rotation lock

Please note the information on screws from HEIDENHAIN in the Encoders for Servo Drives brochure, under Screws with material bonding anti-rotation lock in the chapter General mechanical information.

Mounting aid
To avoid damage to the cable, use the mounting aid to connect and disconnect the cable assembly. The pulling force must be applied only to the connector and not to the wires.

ID 1075573-01

Mounting aid
The mounting aid allows the shaft of the rotary encoder to be turned from the rear of the device, making it easy to find the positive-locking connection between the encoder shaft and the measured shaft.

ID 821017-03
Integrated temperature evaluation

These rotary encoders feature a temperature sensor integrated into the encoder electronics and an evaluation circuit for an external temperature sensor. In both cases, the respective digitized temperature value is transmitted purely serially via the DRIVE-CLiQ interface. Please bear in mind that neither the temperature measurement nor the transmission of the temperature value is safe in terms of functional safety.

The temperature measured by the internal temperature sensor is higher by a device-specific and application-specific amount than the temperature at measuring point M1, as shown in the dimension drawing.

Upon reaching a trigger threshold for the internal temperature sensor, these rotary encoders issue an “Alarm 405” error message. This threshold may vary depending on the encoder model and is stated in the specifications. During operation, it is recommended that the temperature be kept adequately below this threshold.

Fulfillment of the encoder's intended use requires adherence to the operating temperature at measuring point M1.

The internal temperature sensor has an accuracy of ±7 K.

Temperature measurement in motors
To protect a motor from overloading, the motor manufacturer usually installs a temperature sensor in close proximity to the motor winding.

The PT 1000 or, for example, the KTY 84-130 semiconductor sensor is to be used. For a PT 1000, the following values apply with regard to the accuracy of the evaluation circuit:

- ±4 K at 80 °C to 160 °C
- ±6 K at –40 °C to 80 °C
- ±6 K at 160 °C to 200 °C

For a KTY 84-130 semiconductor sensor, the following values apply with regard to the accuracy of the evaluation circuit:

- ±2 K at 80 °C to 160 °C
- ±6 K at –40 °C to 80 °C
- ±6 K at 160 °C to 200 °C

The temperature values are transmitted via the DRIVE-CLiQ protocol.

The temperature sensor used is adjustable via Parameter 601 in the configuration software (e.g., Starter software) of the drive.
Online diagnostics and firmware version

Online diagnostics
For evaluation of the encoder’s functionality, valuation numbers can be cyclically read from the encoder. These valuation numbers reflect the current status of the encoder and can be used to determine its function reserves. The function reserves are also transmitted via the DRIVE-CLiQ interface and can be displayed in the higher-level control.

Further information is available from HEIDENHAIN upon request.

Firmware version
The firmware version can be read out over the DRIVE-CLiQ parameter “Act_FW_Version” (index 0). The final two digits of the displayed value are decisive.
Electrical connection

Cables

**EPG encoder cable inside the motor** Ø 3.7 mm; 2 × (2 × 0.06 mm²) + 4 × 0.06 mm²; \( A_p = 0.06 \text{ mm}^2 \)

With shield crimping (Ø 4.3 mm) and wires for a temperature sensor\(^1\) TPE 2 × 0.16 mm²
